PROFESSIONAL SUMMARY

Web Developer with 3 years of experience in WordPress, WooCommerce, PHP, JavaScript, jQuery, React, Gutenberg (Block Editor), and Elementor. Experienced in developing responsive websites, custom WordPress functionality, WooCommerce features, custom Gutenberg blocks, and Headless WordPress solutions using React and the WordPress REST API. Strong in understanding client requirements, coordinating development tasks, collaborating with designers and developers, and delivering projects from requirements through development.

TECHNICAL SKILLS

WordPress: Custom Themes, Custom Plugins, Template Hierarchy, Hooks & Filters, Custom Post Types, Custom Taxonomies, ACF, AJAX, REST API

WooCommerce: Custom Functionality, Product Filtering, Cart Customization, Hooks & Filters

Frontend: HTML5, CSS3, Bootstrap, JavaScript (ES6+), jQuery, React.js

Gutenberg: Block Editor Development, Custom Gutenberg Blocks, WordPress Block APIs

Backend: PHP, MySQL, WordPress REST API

Page Builders: Elementor / Elementor Pro, BE Theme Builder

Tools: Git, GitHub, VS Code, LocalWP

Currently Learning: Next.js

PROFESSIONAL EXPERIENCE

Web Developer | Geek Web Solutions

June 2023 – September 2026 | Full Time | Remort

- Develop and maintain responsive, SEO-friendly WordPress websites based on client requirements and project specifications.
- Develop custom WordPress functionality using PHP, JavaScript, jQuery, HTML, and CSS.
- Customize WooCommerce functionality, including product filtering, cart behavior, and eCommerce features.
- Develop custom Gutenberg (Block Editor) blocks using React and WordPress Block APIs.
- Build Headless WordPress frontends using React and the WordPress REST API.
- Collaborate with designers and developers to convert design mockups into functional, responsive websites.
- Work with client requirements, troubleshoot development issues, and support projects through implementation.

Web Developer | Geek Web Solution

Previous Experience

- Managed client tasks and requirements, ensuring development work was clearly understood and prioritized.
- Managed new web projects from initial requirement gathering through development and delivery.
- Analyzed client requirements and broke larger requirements into clear, actionable development and design tasks.
- Assigned tasks to developers and designers based on their skills, capabilities, and project requirements.
- Coordinated with developers and designers to track progress, resolve blockers, and ensure tasks were completed correctly and on time.
- Handled web development activities while supporting the overall project workflow and communication between stakeholders and team members.

SELECTED PROJECTS

Open Road Driving School — WordPress

Developed and supported a responsive WordPress website for a driving school project, including custom website functionality and client-driven requirements.

- I worked on an LMS-based driving school system consisting of two WordPress websites.
- The first website handled class locations, class registration, dynamic pricing, payments, and student registration.
- The class would contain a reference to its associated location, allowing multiple classes to belong to the same location. Depending on the implementation, this could be handled using a taxonomy, a custom field relationship, or a custom post relationship.
- I treated the class price as the base amount and then applied additional pricing rules based on the student's selections. Tesla Time had an additional cost when applicable, while the Free/Reduced School Fees option modified the amount according to the configured rules.
- After successful payment, the system automatically created the student's LMS account and sent password setup instructions.

Open Road Course Platform — WordPress / LMS

Worked on a WordPress-based course platform involving course content, video learning, quizzes, student progress functionality, and custom development.

- The second website was the actual LMS where students selected a vehicle and completed a 10-day video and quiz-based course.
- I implemented progress tracking and controlled the course flow so students couldn't skip required videos or quizzes.
- Each quiz required a minimum score of 75% before the next section was unlocked.
- We also implemented REST API communication between the two WordPress installations so the registration website could receive the student's LMS progress and completion status.

Clubfoot Solution — WordPress

Clubfoot Solutions. It is a shoe-selling website built with WordPress and WooCommerce. The website allows customers to browse and purchase shoes online.

- We used WooCommerce for the eCommerce functionality. It was used for products, product details, cart, checkout, orders, and customer purchases.
- I also worked on customizing the WooCommerce functionality according to the project requirements.
- We had different shipping requirements based on the customer's location. If the customer was located inside the US, the order was handled through FedEx. If the customer was outside the US, the order was handled through DHL.

EDUCATION

Bachelor of Technology in Computer Science

Dolat-Usha Institute of Applied Sciences, Valsad, Gujarat, India
